

In the Specification

Kindly replace the paragraph at page 26, lines 13-25 with the following:

In certain preferred embodiments, polymerizable crystallizable compounds, e.g. crystalline monomer(s) are incorporated into the copolymer by chemical bonding to the copolymer. The term “crystalline monomer” refers to a monomer whose homopolymeric analog is capable of independently and reversibly crystallizing at or above room temperature (e.g., 22°C). The term “chemical bonding” refers to a covalent bond or other chemical link between the polymerizable crystallizable compound and one or more of the other constituents of the copolymer. The advantages of incorporating PCC’s into the copolymer are further described in assignee’s co-pending U.S. Patent Application Serial No 10/612,534 titled ORGANOSOL LIQUID TONER INCLUDING AMPHIPATHIC COPOLYMERIC BINDER HAVING CRYSTALLINE COMPONENT~~CHEMICALLY BONDED CRYSTALLIZABLE COMPONENT~~, bearing ~~Attorney Docket No. SAM0004/US~~, and filed on the same day as the present application in the names of Julie Y. Qian et al., said co-pending patent application being incorporated herein by reference in its entirety.
